

Maxon Marine Carbon AGM Series: Powering Your Adventures with Smarter Energy Solutions

Maxon Marine Carbon AGM Series: Powering Your Adventures with Smarter Energy Solutions

Why Marine Batteries Need to Be Built Different

You're halfway through reeling in the catch of the day when your fish finder suddenly goes dark. That sinking feeling? It's not just the fish. Traditional marine batteries often leave boaters stranded - literally and figuratively. Enter Maxon's Marine Carbon AGM Series - the anti-hero we've been waiting for in marine power solutions.

The Brain Behind the Brawn

Carbon Matrix Technology: Think of it as battery armor. By integrating carbon into the lead plates, Maxon achieves 30% faster recharge times compared to standard AGM batteries.

Spill-Proof Design: Tested at 45° angles (because calm seas are for swimming pools).

Vibration Resistance that makes smartphone shock absorbers look like child's play.

Numbers Don't Lie - But They Do Impress

In 2024 testing by Marine Power International, the Carbon AGM series showed:

Cycle Life

1200 cycles at 50% DOD

Self-Discharge
