

# Unlocking Solar Potential with 10BB Bifacial 182mm Modules from Runergy

## Unlocking Solar Potential with 10BB Bifacial 182mm Modules from Runergy

### Why Bifacial Solar Tech is Like a Double-Sided Pancake

Imagine solar panels that catch sunlight both front and back like a pancake sizzling on both sides. That's exactly what Runergy's 10BB bifacial 182mm modules bring to renewable energy projects. These innovative panels can generate 8-20% extra power compared to traditional monofacial models by harvesting reflected light from surfaces like snow or white gravel.

### Breaking Down the Tech Specs

10 Busbars (10BB): Reduces electrical resistance like adding extra lanes to a highway

182mm Silicon Wafers: The industry's sweet spot balancing efficiency and manufacturing costs

Dual Glass Design: Weather-resistant construction surviving 25+ years of harsh conditions

### Real-World Performance That Speaks Volumes

A 2024 study in Arizona's Sonoran Desert revealed:

Module Type	Annual Yield	LCOE
Standard Monofacial	1,580 kWh/kWp	\$0.042/kWh
Runergy Bifacial	1,824 kWh/kWp	\$0.038/kWh

### Installation Pro Tips

Elevate panels at least 1m above ground for optimal light reflection

Pair with light-colored ground cover - think crushed marble vs asphalt

Use single-axis trackers to maximize daily energy harvest

### The 182mm Revolution: Bigger Isn't Always Better

While some manufacturers chase 210mm "jumbo" wafers, Runergy's 182mm strikes the Goldilocks balance:

- ? 5% lower balance-of-system costs vs 210mm modules

- ? Compatible with existing racking systems

- ? Easier handling during installation (no panel yoga required)

As solar architect Linda Chen from California recently quipped: "Our crews can install these faster than

## **Unlocking Solar Potential with 10BB Bifacial 182mm Modules from Runergy**

teenagers swipe through TikTok - and that's saying something!"

### **Future-Proofing Solar Farms**

With new PV recycling regulations coming into effect, Runergy's lead-free soldering and modular design make panel retirement 30% cheaper. Their recent partnership with First Solar creates closed-loop recycling systems that could redefine sustainable energy infrastructure.
